

Instantly know
WHEN and **WHERE**
a 9-1-1 call occurs
at your facility.

Spending time looking for the source of a 9-1-1 call may affect the outcome of the emergency and could create serious liabilities. Because of this, many states have mandated that PBX systems be capable of providing location identification whenever a 9-1-1 call is placed. Adding a Tone Commander 9130 or 9140 to your PBX will meet this requirement.

When a 9-1-1 call occurs, you and your preselected emergency team are automatically notified by text messages sent to your PC desktops, pagers, cell phones, and alerting call displays. Whether you're onsite or not, notification of the emergency and its location will reach you within seconds, allowing your facility to implement your predetermined response to the situation.

9-1-1 Call Locator Features
