Tone Commander Introduces First TSG-6 SIP Compliant IP Phone *7810 TSG-6 IP Device Receives NTSWG Approval; Tone Commander Accepting Orders*

MUKILTEO, Wash. – April 30, 2009 – Tone Commander today introduced the industry’s first TSG-6 Session Initiation Protocol (SIP) compliant phone, offering customers cutting-edge technology and features, unmatched user flexibility and extraordinary value. In addition, Tone Commander announced that the National Telecommunications Security Working Group (NTSWG) has approved its new TSG-6 SIP compliant IP phone for government and military use.

The 7810 TSG-6 IP phone is ‘Made in the USA’ and offers more flexibility than any other IP device on the market. Additionally, it enables integration wherever IP networks are available and provides an array of security and encryption options for customers who require ultra-secure communications from locations around the world.

“We are proud to offer this dynamic, cutting-edge new phone,” said Steve Hill, president of Tone Commander. “This new device provides our customers with the best of both worlds – best-in-class quality and top-of-the-line functionality with excellent flexibility. And with NTSWG certification, the phone can now be deployed for sophisticated government and military applications.”

Among its key features and benefits, Tone Commander’s 7810 TSG-6 IP phone offers:

- RTP voice encryption (AES-128) and TLS signaling encryption included in FIPS 140-2 approved algorithms.
- Unique DoD features specified in DISN RTS GSR (Defense Information Systems Network, Real Time Services, Generic Systems Requirements).
- Multi-level precedence and preemption, providing barge-in capabilities for high-priority calls.

The Tone Commander 7810 TSG-6 IP phone is Class-A compliant and can be used in Sensitive Compartmented Information Facilities (SCIF) areas without any other equipment for on-hook security. Special positive metallic-disconnect circuitry is built in to guarantee that no unintended microphonic audio signals are produced on any wires leaving the phone. Moreover, additional built-in circuitry completely disconnects the phone from the network when power is removed.

The 7810 TSG-6 IP phone adds to Tone Commander’s strong heritage and lineup of cutting-edge communications tools, which includes a series of ISDN and VoIP telephones, NT1 ISDN Network Terminations, ISDN Centrex Attendant Consoles, and Enhanced 9-1-1 (E9-1-1) Emergency Awareness Solutions.

Pricing and availability

Tone Commander's 7810 TSG-6 IP phone is priced at \$880.50 for retail or \$599 for GSA eligible customers. For ordering information, please call 800.524.0024.
